

Action Plan Report

Application: MapCore

Analysis label: Project Part 3 Deliverable

Analysis date: 2016/04/06 01:14

Report date: 2016/04/06 13:18

OVERVIEW

This action plan is the result of a What If exercise calculated in order to get better in quality spending the less as possible. In this section Kiuwan provides the main numbers as they are now and as they are going to be if all suggested correction wil be done.

Effort to spend

33.75 Hours

	As is 	To be 
Risk index	97.04	0.00
Global indicator	41.58	83.74
Effort to target	34 h	0 h

INDICATOR VALUES

You have the model indicators in the current analysis and the ones that you are going to get if you executes this Action Plan.

	As is	To be
Maintainability	4.59	90.72
Reliability	64.43	91.06
Portability	31.25	40.48
Efficiency	0.56	80.44
Security	93.71	93.71
Global indicator	41.58	83.74

Global indicator

83.74

EFFORT TO SPEND

In this chapter you have a detailed budget of this action plan.
You get a breakdown according to the software characteristics defined in CQM model.

Effort to spend

33.75 Hours

Effort to spend	
Efficiency	7.1 Hours
Maintainability	22.85 Hours
Portability	1.7 Hours
Reliability	2.1 Hours
Security	0 Hours
Total	33.75 Hours

DETAILED ACTION PLAN

This chapter contains the technical information of the Action Plan. You have a different section for each broken rule.

About each rule you have the number of defects that you have to correct and the number of files that you need to change. In addition you get the software characteristic, the language, the priority (importance) and the difficulty (represents the time you need to apply the change).

Then you can read (in bold) each file that contains defects, and at the end the line number and the text line where you can find the defect.

2 Defect(s)	Use getClass() in the equals() method	Efficiency	Priority 2
2 File(s)	implementation.	java	Effort 6m

CMPUT402W16T1-master/MapCore/src/main/java/com/cmput402w2016/t1/data/Location.java

87 public boolean equals(Object object) {

CMPUT402W16T1-master/MapCore/src/main/java/com/cmput402w2016/t1/data/TrafficData.java

23 public boolean equals(Object object) {

10 Defect(s)	Do not instantiate temporal Objects in loops	Efficiency	Priority 2
5 File(s)	bodies.	java	Effort 6m

CMPUT402W16T1-master/MapCore/src/main/java/com/cmput402w2016/t1/converter/Converter.java

49 Location from = new Location(latitude, longitude);

59 PrintWriter out = new PrintWriter(filename);

70 Location to = new Location(segmentNode.getKey());

CMPUT402W16T1-master/MapCore/src/main/java/com/cmput402w2016/t1/data/Node.java

```
309 Scan scan = new Scan();
316 return new Node(actual_geohash, tags);
```

CMPUT402W16T1-master/MapCore/src/main/java/com/cmput402w2016/t1/data/Segment.java

```
76 JsonParser jsonParser = new JsonParser();
94 Scan scan = new Scan();

ABOUT OPTIMYTH

Optimyth is an independent software company specialized in solutions to support large companies with their rationalization, quality and productivity management initiatives whilst improving the overall maintainability of the software estate. Our solutions raise the quality and increase the performance of business systems. They improve the efficiency, cost control and productivity within an organization, thus achieving maximum IT value.

These solutions are based on our state of the art checking products: an Integrated Application Quality Management Portal which aggregates information from all the stages of a development life cycle into one "single pane of glass". And, an Application Inventory Management system that allows companies to untangle the complexity of their application through automatic discovery of software components, and the relationships between them at different levels, enabling rationalization initiatives and impact analysis capabilities to reduce maintenance costs.
